Abstract. The electromagnetic properties of four microinstabilities in an inhomogeneous plasma with a temperature gradient are studied analytically and numerically. The evolution of the drift cyclotron loss cone instability as the loss cone velocity distribution is progressively filled with a warm Maxwellian component is studied.

The stability of inhomogeneous collisionless plasmas with respect to electromagnetic perturbations is studied. The macroscopic equilibrium parameters depend on a single coordinate of an orthogonal system. The current carried by the particles of the plasma is directed along another coordinate axis.

Indeed, instabilities arising in inhomogeneous plasmas can be the origin of a turbulent state characterised by a certain level of uctuations. The electromagnetic elds associated with these uctuations can cause stochastic motion of the constituent plasma particles.

PARAMETRIC INSTABILITIES IN AN INHOMOGENEOUS PLASMA ...

The paper investigates the decay of electromagnetic pump waves due to the parametric interaction of collective modes in an inhomogeneous unmagnetized plasma. Parametric decay due to Raman scattering (including backscattering and sidescattering) and Brillouin scattering (by undamped and heavily damped ion waves) of the pump wave on plasma waves is examined.

Electromagnetic Instabilities In An Inhomogeneous Plasma

Kinetic equations for low frequency, short perpendicular wavelength, electromagnetic perturbations in an inhomogeneous, magnetically confined plasma are developed. The analysis makes use of the recently developed high toroidal mode number expansion to reduce the lowest-order system of equations to a set of ordinary (along the field line) integro-differential equations.

The interaction of electromagnetic waves with matter has always been a fascinating subject of study. As matter in the universe is mostly in the plasma state, the study of electromagnetic waves in plasmas is of importance to astrophysics, space physics and ionospheric physics. The physics of electromagnetic wave interacting with electron beams and plasmas also serves as a basis for coherent ...

in inhomogeneous plasmas to test the validity of these theories and to determine what type of plas-ma heating one may obtain. This requires either sufficiently high temperatures and/or sufficiently collisionless plasmas, and electromagnetic waves incident onto an inhomogeneous plasma from the outside.
