To set up a single LinkProof device with external SOA 1. Set up static NAT addresses for the Web server using the following LinkProof panes:

- LinkProof > Global Configuration > Enable Smart Nat
- LinkProof > SmartNAT > Static NAT > Insert rows

Because LinkProof handles the public addresses in this example, use the following static NAT settings:

Radware's LinkProof is designed to provide load balancing and fault tolerance for multiple network connections. Because it is an extension of the FireProof, the LinkProof can also load balance both transparent and non-transparent firewalls as well; however, it is optimized to work with multiple links.

Access control lists (ACLs) enable you to restrict network use by certain users or devices. The new Stateful ACL module available with LinkProof 6.20 not only allows you to restrict access by certain clients or to certain servers, it can also distinguish legitimate packets for different types of connections and allow only packets matching a known connection state; others will be rejected.

Radware performs internal hardware changes from time to time. Recent thermal mapping implemented on Radware platforms indicates that some of the internal fans are redundant. That is, that not all the fans are required to maintain correct component temperature. These redundant fans were removed in new hardware revisions.
